

Presse Release #3

February 2024

Renewed partnerships and new ones for 2024 12 and 13 June, two highly promising days not to be missed.

For this 16th edition of the not-to-be-missed event for French and foreign manufacturers in the mobility and manufacturing industry sectors, the partners of the 2023 edition have renewed their confidence and new ones have joined the regulars.

Among these new partners, **Racecar Engineering**, a global technological publication dedicated to motorsport engineering, will complement the **commercial** aspect of the IBDLM2024.

Among the faithful partners, **GPO Magazine**, a BtoB media aimed at informing and enlightening executives of SMEs, SMLs, and ETIs in their decision-making and reflections on the future of their organization, renews their partnerships in 2024 for the **7th consecutive** year.

In addition, the programme for the two days is taking shape, with leading speakers scheduled to take part in the conferences and round tables.

Personalised 1to1 meetings of 20 minutes each, pre-programmed in May

Conferences and panel discussion on current topics :

- Multi-material additive manufacturing, presented by **EOS** with: **support-free DMLS® printing, myth or reality?**
- Motorsport, a formidable technological booster
- Hydrogen, the energy carrier of the future
- The electric vehicle, from producer to consumer

Product presentations, by companies sharing their technological breakthroughs

The **Additive Manufacturing Village**, where the latest 3D printing technologies are on display

Exhibition areas for the latest know-how, as well as race cars and innovative vehicles

Product and service demonstration areas

Start-ups have the floor, 5 minutes for powerful pitch

Private, guided tour of the paddocks and a **pit** of a **team** taking part in the **24 Hours of Le Mans**

Tech talk in the **Michelin Motorsport** or **Goodyear Racing** assembly workshop

Opportunity to attend **free practice during the day** and **qualifying at night**

Decision-makers, buyers, sales staff and engineers from all the sectors involved in these exchanges, motor sports, cars, industrial vehicles, aeronautics, railways, space, defence and the manufacturing industry in general, are taking part in these two exceptional days.

These include, **Angst & Pfister**, innovation development partner for rubber components;

ARRK LCO PROTOMOULE, specialised in rapid prototyping as well as small and medium production runs of plastics

and metals; **EOS**, the world's leading technology provider for 3D printing of metals and plastics; **TMD Friction**, one of

the world's leading manufacturers of friction materials for the automotive, motorsport and rail industries,
